Information

The B600 Outdoor Living is the innovative continuation of the proven technology of the B200 family. Its elegant, S-shaped louvres not only allow you to rotate, but also open to any position. With the roof completely open, the remaining roof surface only takes a mere 13%. Ideal for an optimal light in the mid-season.

The atmosphere lighting options for the B600 create a trendy mood on the undulating louvered roof, while the LED spots on the L-side provide direct and downward light.

For larger surfaces, you can couple different modules of the B600. A small amount of sun, a lot of sun or even a little bit of rain ... The B600 adapts as a real convertible.

- Regulate the perfect amount of light, sun shading and ventilation
- S-shaped louvres for a better water drainage
- When opened the remaining roof surface takes a mere 13%
- Water drainage with 4 coupled gutters
- Roof looks more elegant with the graceful louvers
